PROFESSIONAL SUMMARY

Mobile Developer with a track record of owning high-impact mobile products end to end - from inheriting a poorly architected live-streaming app and rebuilding it for 60fps performance, to leading a full BLoC and clean architecture migration on a production kiosk system serving F&B businesses across Singapore. Focused on stable state management, offline-first data design, and shipping features that hold up under real-world edge cases.

TECHNICAL SKILLS

Languages: Dart, Python	Architecture: Clean Architecture, Monorepo (Melos)
Frameworks: Flutter	Data & Storage: Hive, SharedPreferences, Dio, json_serializable
State Management: BLoC, Cubit, Riverpod, Provider, GetX	Tools: GitHub, Bitbucket, Sentry, Firebase, GetIt, Injectable, flutter_test

EXPERIENCE

Mobile Developer <i>YQueue Singapore</i>	August 2025 – Present
- Led a full migration of the production kiosk application from MVVM to BLoC with clean architecture and a monorepo structure, including phased data migration from legacy storage to Hive with backwards-compatible conversion logic to ensure zero disruption on existing deployed devices. - Built an offline-first transaction system across primary and secondary kiosk devices, using a revision-based conflict resolution strategy over LAN to guarantee data consistency without internet dependency. - Integrated hardware support for thermal printers and cash drawers via ESC/POS, covering automated print triggers and drawer control as part of the core payment flow. - Maintained low QA defect rates by prioritising edge-case handling and writing unit tests for repository and data parsing logic — the highest-consequence layer for order accuracy. - Developed key F&B workflows including quick ordering, custom payment method handling, and real-time order tracking across a 4-person team.	
Mobile Developer <i>Con Cung Corporation</i>	July 2024 – July 2025
- Sole Flutter developer on the company’s live-streaming commerce app, serving ~3,000 concurrent viewers across 5 daily sessions and averaging ~300M VND in revenue per stream. - Inherited an application loading 700+ products at once without pagination — rebuilt the data layer end to end, bringing page-change frame rate from 5–6fps to a stable 60fps and reducing device heat enough for users to hold the phone comfortably throughout a session. - Drove an animation-light UI design in collaboration with designers and analysts, prioritising load speed while introducing engagement features such as live polls and lucky gift boxes that encouraged interactivity without compromising buying flow. - Integrated Flutter mini-apps into native platforms via method channels to extend e-commerce functionality.	
iOS Developer Intern <i>GeoComply Vietnam</i>	May 2023 – August 2023
Built a Safari Web Extension in SwiftUI to bridge communication between the company’s web and mobile SDKs and researched new iOS features and beta versions by following WWDC events.	

EDUCATION

Computer Science <i>Ho Chi Minh City University of Technology</i>	September 2020 – September 2024
Graduated with distinction (GPA: 8.39). Recipient of Multiple Academic Incentive Scholarships.	

SOFT SKILLS & LANGUAGES

Soft skills: Presentation, Time Management, Transparent Communication, Teamwork	
Languages: <i>Vietnamese</i> (Native), <i>English</i> (Full professional proficiency - IELTS 8.0), <i>French</i> (Limited working proficiency - DELF A2 / Currently preparing for B2)
